install.packages("ggplot2")
```

```
library(ggplot2)
```

ggplot2

Data visualization with ggplot2 :: CHEAT SHEET

Basics

ggplot2 is based on the **grammar of graphics**, the idea that you can build every graph from the same components: a **data** set, a **coordinate system**, and **geoms**—visual marks that represent data points.

To display values, map variables in the data to visual properties of the geom (**aesthetics**) like **size**, **color**, and **x** and **y** locations.

Complete the template below to build a graph.

```
ggplot(data = <DATA>) +  
  <GEOM_FUNCTION>(mapping = aes(<MAPPINGS>),  
    stat = <STAT>, position = <POSITION>) +  
  <COORDINATE_FUNCTION> +  
  <FACET_FUNCTION> +  
  <SCALE_FUNCTION> +  
  <THEME_FUNCTION>
```

required
Not required, sensible defaults supplied

`ggplot(data = mpg, aes(x = cty, y = hwy))` Begins a plot that you finish by adding layers to. Add one geom function per layer.

`last_plot()` Returns the last plot.

`ggsave("plot.png", width = 5, height = 5)` Saves last plot as 5" x 5" file named "plot.png" in working directory. Matches file type to file extension.

Aes

Common aesthetic values.

color and **fill** - string ("red", "#RRGGBB")

linetype - integer or string (0 = "blank", 1 = "solid", 2 = "dashed", 3 = "dotted", 4 = "dotteddash", 5 = "longdash", 6 = "twodash")

lineend - string ("round", "butt", or "square")

linejoin - string ("round", "mitre", or "bevel")

size - integer (line width in mm)

shape - integer/shape name or a single character ("a")

Geoms

Use a geom function to represent data points, use the geom's aesthetic properties to represent variables. Each function returns a layer.

GRAPHICAL PRIMITIVES

`a <- ggplot(economics, aes(date, unemployment))`
`b <- ggplot(seals, aes(x = long, y = lat))`

a + geom_blank() and **a + expand_limits()**
Ensure limits include values across all plots.

b + geom_curve() (`aes(yend = lat + 1, xend = long + 1, curvature = 1)` - x, yend, y, yend, alpha, angle, color, group, linetype, size)

a + geom_path() (`lineend = "butt", linejoin = "round", linemitre = 1`) - x, y, alpha, color, group, linetype, size

a + geom_polygon() (`aes(alpha = 50)`) - x, y, alpha, color, fill, group, subgroup, linetype, size

b + geom_rect() (`aes(xmin = long, ymin = lat, xmax = long + 1, ymax = lat + 1)` - xmax, xmin, ymax, ymin, alpha, color, fill, linetype, size)

a + geom_ribbon() (`aes(ymin = unemployment - 900, ymax = unemployment + 900)` - x, ymax, ymin, alpha, color, fill, group, linetype, size)

LINE SEGMENTS

common aesthetics: x, y, alpha, color, linetype, size

b + geom_abline() (`aes(intercept = 0, slope = 1)`)
b + geom_hline() (`aes(yintercept = lat)`)
b + geom_vline() (`aes(xintercept = long)`)

b + geom_segment() (`aes(yend = lat + 1, xend = long + 1)`)
b + geom_spoke() (`aes(angle = 1:1155, radius = 1)`)

ONE VARIABLE continuous

`c <- ggplot(mpg, aes(hwy)); c2 <- ggplot(mpg)`

c + geom_area() (`stat = "bin"`) - x, y, alpha, color, fill, linetype, size

c + geom_density() (`kernel = "gaussian"`) - x, y, alpha, color, fill, group, linetype, size, weight

c + geom_dotplot() - x, y, alpha, color, fill

c + geom_freqpoly() - x, y, alpha, color, group, linetype, size

c + geom_histogram() (`binwidth = 5`) - x, y, alpha, color, fill, linetype, size, weight

c2 + geom_qq() (`aes(sample = hwy)`) - x, y, alpha, color, fill, linetype, size, weight

discrete

`d <- ggplot(mpg, aes(fit))`

d + geom_bar() - x, alpha, color, fill, linetype, size, weight

TWO VARIABLES both continuous

`e <- ggplot(mpg, aes(cty, hwy))`

e + geom_label() (`aes(label = cty)`, `nudge_x = 1`, `nudge_y = 1`) - x, y, label, alpha, angle, color, family, fontface, hjust, lineheight, size, vjust

e + geom_point() - x, y, alpha, color, fill, shape, size, stroke

e + geom_quantile() - x, y, alpha, color, group, linetype, size, weight

e + geom_rug() (`sides = "bl"`) - x, y, alpha, color, linetype, size

e + geom_smooth() (`method = lm`) - x, y, alpha, color, fill, group, linetype, size, weight

e + geom_text() (`aes(label = cty)`, `nudge_x = 1`, `nudge_y = 1`) - x, y, label, alpha, angle, color, family, fontface, hjust, lineheight, size, vjust

one discrete, one continuous

`f <- ggplot(mpg, aes(class, hwy))`

f + geom_col() - x, y, alpha, color, fill, group, linetype, size

f + geom_boxplot() - x, y, lower, middle, upper, ymax, ymin, alpha, color, fill, group, linetype, shape, size, weight

f + geom_dotplot() (`binaxis = "y", stackdir = "center"`) - x, y, alpha, color, fill, group

f + geom_violin() (`scale = "area"`) - x, y, alpha, color, fill, group, linetype, size, weight

both discrete

`g <- ggplot(diamonds, aes(cut, color))`

g + geom_count() - x, y, alpha, color, fill, shape, size, stroke

e + geom_jitter() (`height = 2, width = 2`) - x, y, alpha, color, fill, shape, size

THREE VARIABLES

`sealsSz <- with(seals, sqrt(delta_long^2 + delta_lat^2)); l <- ggplot(seals, aes(long, lat))`

l + geom_contour() (`aes(z = z)`) - x, y, z, alpha, color, group, linetype, size, weight

l + geom_contour_filled() (`aes(fill = z)`) - x, y, alpha, color, fill, group, linetype, size, subgroup

continuous bivariate distribution

`h <- ggplot(diamonds, aes(carat, price))`

h + geom_bin2d() (`binwidth = c(0.25, 500)`) - x, y, alpha, color, fill, linetype, size, weight

h + geom_density_2d() - x, y, alpha, color, group, linetype, size

h + geom_hex() - x, y, alpha, color, fill, size

continuous function

`i <- ggplot(economics, aes(date, unemployment))`

i + geom_area() - x, y, alpha, color, fill, linetype, size

i + geom_line() - x, y, alpha, color, group, linetype, size

i + geom_step() (`direction = "hv"`) - x, y, alpha, color, group, linetype, size

visualizing error

`df <- data.frame(grp = c("A", "B"), fit = 4:5, se = 1:2)`
`j <- ggplot(df, aes(grp, fit, ymin = fit - se, ymax = fit + se))`

j + geom_crossbar() (`fatten = 2`) - x, y, ymax, ymin, alpha, color, fill, group, linetype, size

j + geom_errorbar() - x, ymax, ymin, alpha, color, group, linetype, size, width
Also `geom_errorbarh()`.

j + geom_linerange() - x, ymin, ymax, alpha, color, group, linetype, size

j + geom_pointrange() - x, y, ymin, ymax, alpha, color, fill, group, linetype, shape, size

maps

`data <- data.frame(murder = USArrests$Murder, state = tolower(rownames(USArrests)))`
`map <- map_data("state")`
`k <- ggplot(data, aes(fill = murder))`

k + geom_map() (`aes(map_id = state)`, `map = map`) + `expand_limits(x = map$long, y = map$lat)`
`map_id`, `alpha`, `color`, `fill`, `linetype`, `size`

ggplot funciona en capas

```
ggplot(misdatos) +  
  geom_point(aes(gp, y)) +  
  geom_point(data = ds, aes(gp, mean), colour = 'red')+  
  scale_y_log()+  
  labs(x= "Temperatura")
```

ggplot funciona en capas

```
ggplot(...) +  
  geom_(...) +  
  geom_(...) +  
  scale_(...) +  
  labs(...)
```

Centrado en dataframes

ggplot funciona en capas

Capa base

```
ggplot(data= midataframe, aes(x=, y=, ...)) +
```

Define generalidades del plot

- El dataframe de los datos
- Puedo definir las variables Involucradas (aesthetics)

ggplot funciona en capas

Capas de representación

`geom_()` +

En cada capa defino la forma de representar esas variables

ggplot funciona en capas

Tipos de capas

- `geom_point()`
- `geom_text()`
- `geom_bar()`
- `geom_tile()`

ggplot funciona en capas

Tipos de capas

- `geom_line()`
- `geom_area()`
- `geom_path()`
- `geom_polygon()`

Tipos de datos - tipos de gráficos

Datos de ejemplo

Sepal.Length ↕	Sepal.Width ↕	Petal.Length ↕	Petal.Width ↕	Species ↕
5.1	3.5	1.4	0.2	setosa
4.9	3.0	1.4	0.2	setosa
4.7	3.2	1.3	0.2	setosa
4.6	3.1	1.5	0.2	setosa
5.0	3.6	1.4	0.2	setosa
5.4	3.9	1.7	0.4	setosa
4.6	3.4	1.4	0.3	setosa
5.0	3.4	1.5	0.2	setosa
4.4	2.9	1.4	0.2	setosa
4.9	3.1	1.5	0.1	setosa
5.4	3.7	1.5	0.2	setosa

Una variable

¿Numérica o categórica?

Tipos de datos - tipos de gráficos

Una sola variable

- Variable numérica

Frecuencias

¿Numérica o categórica?

Frecuencias

- Categóricas (frecuencia de cada categoría)
- Numéricas (frecuencia por rangos, HISTOGRAMA)

Tipos de datos - tipos de gráficos

Frecuencias de una variable: categórica

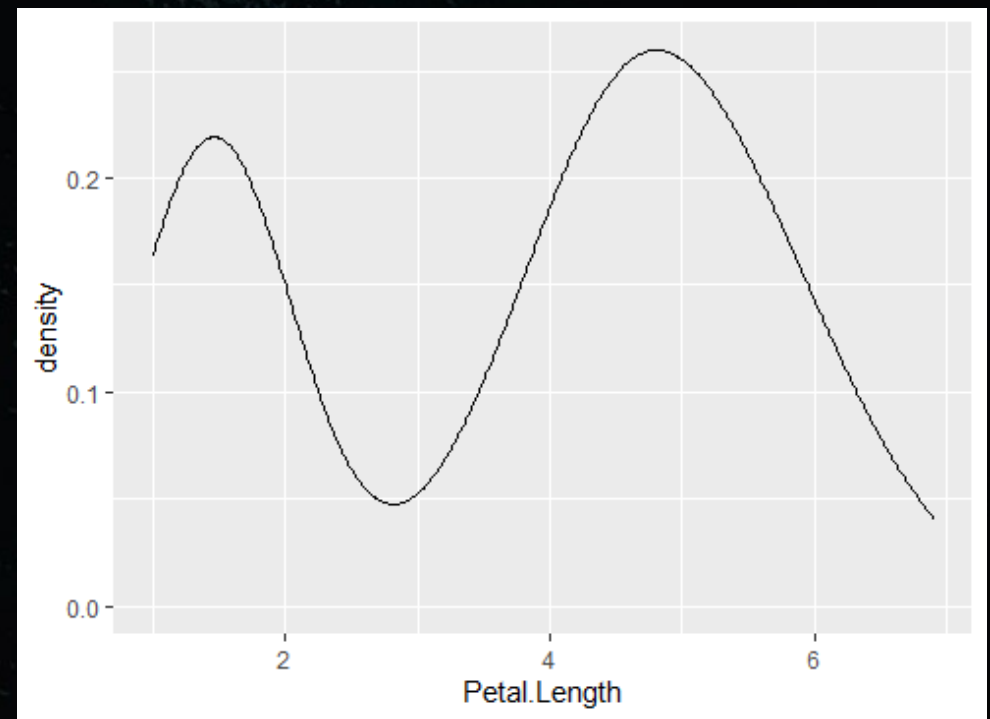

Tipos de datos - tipos de gráficos

Frecuencias de una variable: numérica

Histograma

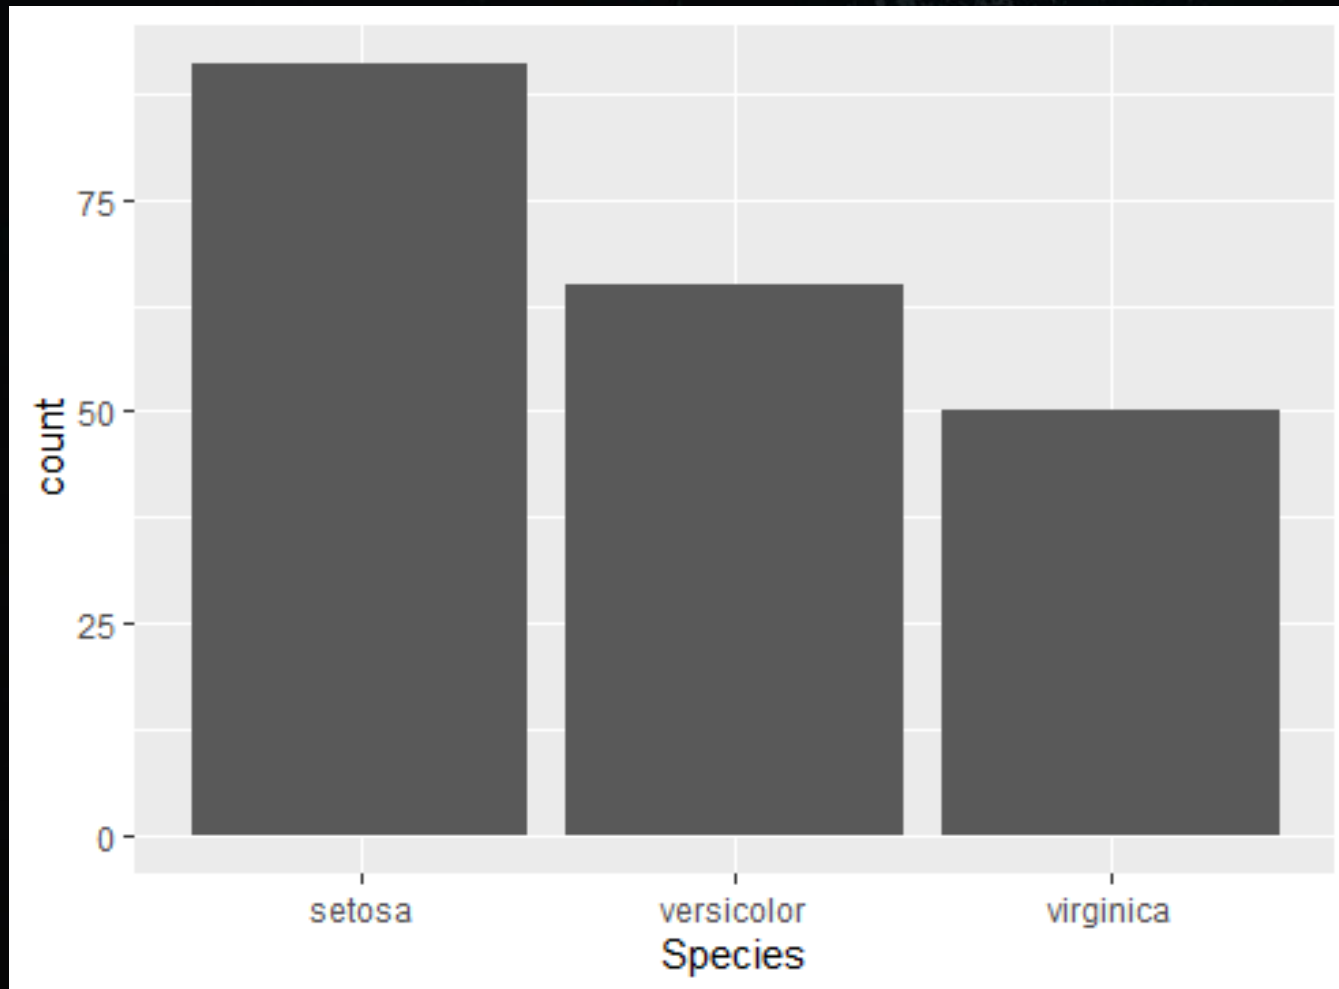

Curva de densidad

Tipos de datos - tipos de gráficos

Una sola variable

- Variable categórica

Dos variables
